DA3331 - Business Application Development

Group Project

1. Task

Develop a web application for the given topic/scenario. You are expected to use Django or any other web application framework and CSS frameworks. Project codes should be properly maintained in a public GitHub repository.

Topics give only a high level idea. You are free to develop the idea as you wish. You may use built-in admin interfaces in the Django or other frameworks for administrative purposes. But you have to implement end user authentications and interfaces.

2. Topics/Scenarios

1. Freelance marketplace – Freelancers create profiles and apply for tasks offered by clients. Clients can award the tasks to freelancers.
   Groups: 1

2. Job vacancy platform - An application for posting job vacancies, allowing candidates to apply online, managing the recruitment process.
   Groups: 2

3. HR application – HR managers can create employee profiles and keep track of their information. Employees can login to the application and request leaves etc.
   Groups: 3

4. Maintenance system for apartments – Tenants can submit various issues. Property managers can review incoming requests, assign technicians, and update the status.
   Groups: 4

5. Real estate listings platform - An application for listing properties for sale or rent. Users can search for properties based on various criteria, viewing property details, and contacting agents.
   Groups: 5

6. Photo sharing social network – Users can register and post their photos and tag their friends. They can also check others' photos and comment on them.
   Groups: 6

7. Restaurant ordering system – The restaurant lists food items and customers can add items to their cart and make orders.
   Groups: 7

8. Car selling platform – Users can list their vehicles to sell. Customers can search for vehicles and bid with the maximum prize they like to buy.

Groups: 8

9. Online appointment system – A scheduling platform for service-based businesses like salons, clinics, or consultants where clients can book a time.
   Groups: 9

10. Online movie ticket system – The theatre list the movies with show times. Users can book tickets providing the date and other details.
    Groups: 10

11. Simple e-commerce system – Shop management create and products under various categories. Customers can register in the system and add items to cart and checkout.
    Groups: 11

12. Expense tracking application - A tool to help users track their income and expenses, categorize spending and see reports.
    Groups: 12

13. Asset Booking System – Students can book university resources (labs, equipment, meeting rooms), and administrators can manage availability and get usage reports.
    Groups: 13

14. Smart Bus E-Ticketing System – Allows passengers to purchase digital tickets, view routes, and reserve seats online. Bus operators can manage schedules, fares, and seat availability. Conductors validate tickets.
    Groups: 14

3. Grading Scheme

This project will be grade based on the,

1. Functionality
2. Visual look and feel
3. Code quality
4. GitHub repository
5. Group collaboration

Check the attached evaluation rubric for more details.

4. Deadline

The project should be submitted on or before 24th April 2025.

DA3331 - Business Application Development
Group Project Evaluation Rubric

Group	

	Scale				Points
Dimension	**Excellent**	**Good**	**Satisfactory**	**Unsatisfactory**	
	30 points	20 points	10 points	0 points	
Functionality	Implemented all the functionality generally expected from the application	Implemented most of the functionality generally expected from the application	Implemented only the basic functionality expected from the application	Not even the basic functionality is covered	/30
Visual look and feel	30 points	20 points	10 points	0 points	
	Well-designed user interface using features of a CSS framework	Standard designed user interface with a CSS framework	Basic user interface design with some use of a CSS framework	Poorly designed interface without any CSS frameworks	/30
Code Quality	20 points	14 points	8 points	0 points	
	Well written refactored code with adhering to coding practices	Refactored code with adhering to coding practices	Refactored code without following coding practices	Poorly written code without following coding practices	/20
Git Repository	20 points	14 points	8 points	0 points	
	Git repository well maintained with 50+ commits	Git repository well maintained with 20+ commits	Git repository maintained but less than 10 commits	No Git repository maintained	/20
				Total Marks	

Individual Contribution in Git Repository

Dimension	**Excellent** **100% marks**	**Good** **80% marks**	**Satisfactory** **60% marks**	**Unsatisfactory** **50% marks**	**Individual Points**
